

# Every flu season is different

## It's not too late to get the flu vaccine

Even when the vaccine doesn't prevent the flu, it can lessen its impact.

The U.S. Centers for Disease Control and Prevention recommends that everyone ages six months and older gets the flu vaccine this season. Flu viruses are most common during the fall and winter, but activity can last as late as May. That's why getting vaccinated in January or later can still help protect you and others from the flu.

### CONFIRMED FLU CASES IN NEW YORK STATE

OCTOBER 2016 - FEBRUARY 2019
